

Reviewed Cervical Cytology Research Pre-screen

Case ANONG-DEMO-NILM | Generated 2026-07-21T19:18:39.691002

DECISION-SUPPORT OUTPUT ONLY. Not a final diagnosis, not an HPV DNA/RNA test, and not a regulated clinical report.

Case and clinical context

Case identifier	ANONG-DEMO-NILM
Age	Not entered
Specimen	Unknown
Reported symptoms	None entered
Last screening	Unknown
HPV laboratory test	not_performed
Other risk context	None entered

Clinical context is report-only. It was not used to alter the image model prediction.

AI pre-screen and reviewed interpretation

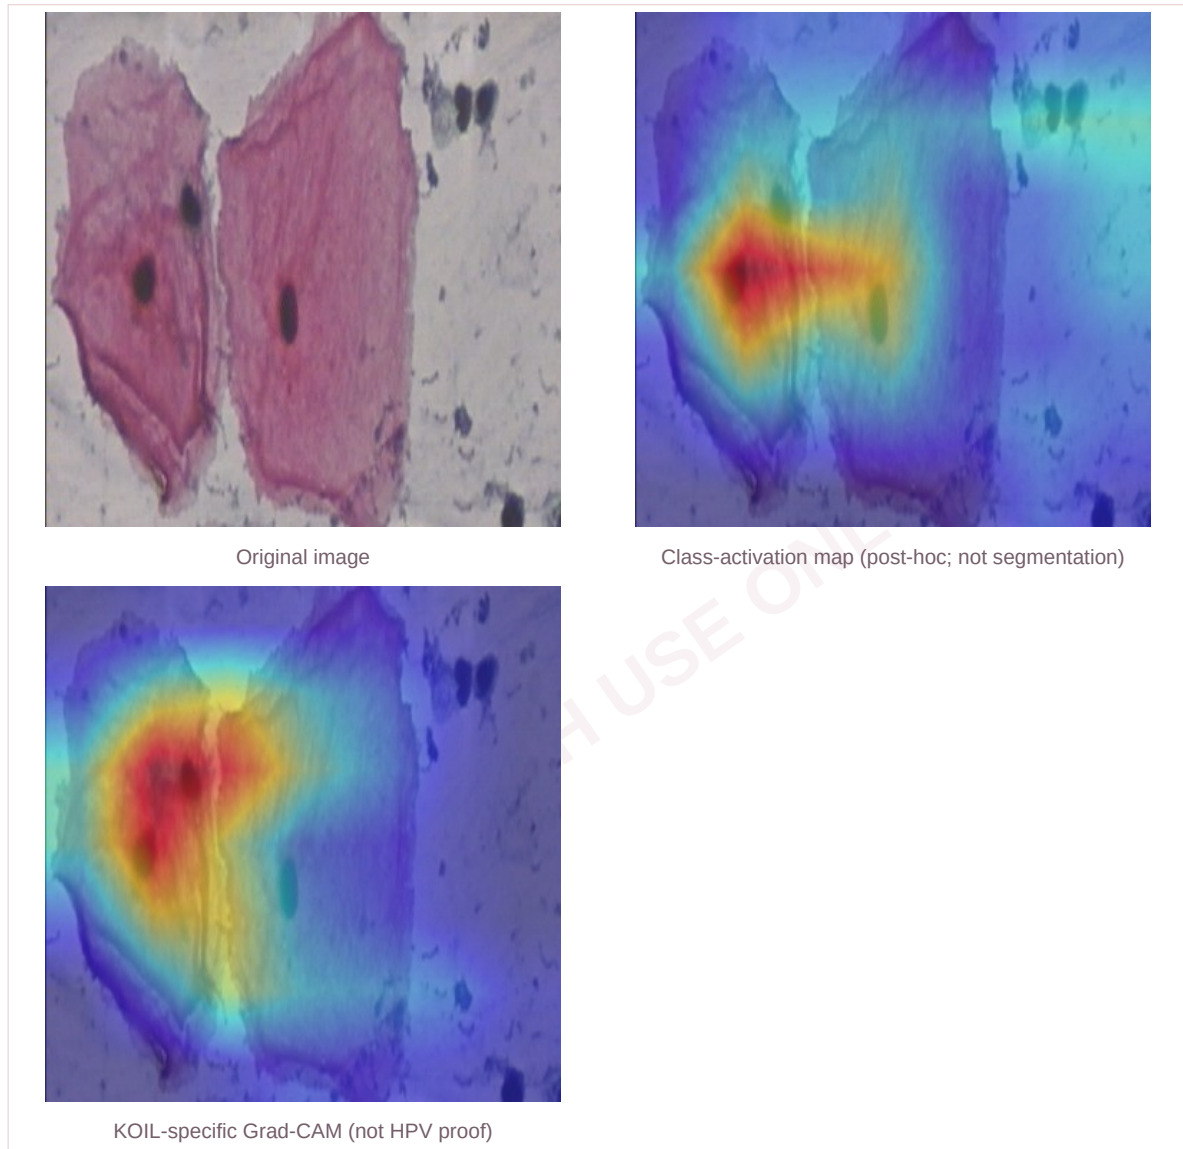

AI suggestion	NILM (74.9%)
Reviewed category	NILM
Uncertainty	unknown
Image quality	pass
Grade XAI	gradcam
KOIL morphology	positive (78.1%)
KOIL locked-test evidence	Sensitivity 96.2%; specificity 97.6%; AUROC 0.991
CCCID positive challenge	19/20 detected; specificity not estimable
Triage	Review the independent KOIL morphology finding; HPV DNA/RNA testing remains separate and may be considered under applicable guidance.
Recommended action	Expert review of the KOIL morphology finding; separate HPV testing when clinically indicated.

Safety and release status

Clinician review	confirmed
Patient-facing release	reviewed_demo

Release blockers	None
Symptom safety	No symptoms were entered. Absence of entered symptoms is not a clinical finding.

Image evidence and limitations

Interpretive boundaries

The grade model estimates cervical cytology morphology. The independent KOIL endpoint was trained on SiPaKMeD conventional Pap-smear crops and challenged on 20 expert-labelled CCCID liquid-based koilocyte images. Neither endpoint detects HPV DNA, HPV RNA, viral genotype, persistence, or infection status.

A class-activation map shows image regions that contributed to a model score. It is a post-hoc explanation and must not be presented as a validated nucleus/cell segmentation or causal proof.

The system has not completed external clinical validation on Thai ThinPrep cohorts and must not be used for autonomous diagnosis, treatment selection, or reassurance of a symptomatic patient.
